# Elsema Coding Instructions

Programming Remotes:

To program MK127 remote, you just need to duplicate the coding of your old remote (back inside the remote) to the new remote, and make sure the coding of old remote is as same as that of new remote.

Note: One thing need to be paid attention, since your old remote only has 10 dip switches, the new one has 12, so please switch the 11 and 12 witches of new remote in the position "on".

For example, your old remote has coding combination 1-10 as below

On

Off

1 2 3 4 5 6 7 8 9 10

Then, you duplicate the existing coding and put 11 and 12 of new remote "on" as below

On

Off

1   2   3   4   5   6   7   8   9   10 11 12 (set 11 and 12 to 'ON')

That is all for the programming, simple and easy. Now you can test the new remote.
