Merlin Coding Instructions

Programming Remotes:

Locate the code switches on the motor (usually hidden by a small black plastic access panel.) Remove the visor clip and battery cover from the new remote control. Locate the code switches in the new remote control. Match the code switches in the new remote control to the code switches in the opener. (DO NOT CHANGE THE CODE SWITCHES IN THE OPENER). Alternatively, if you have an existing remote control, you can match the code switches in the new remote control to the code switches in your existing remote control.
